

# So works your Smarald® Anti-Aging-Filterstick

Suitable for hot and cold drinks (+5 ° C to +75 ° C)

✓  
Base compensation

✓  
Neutralization of free radicals

✓  
Stimulation of the metabolism

✓  
Strong antioxidant

✓  
Ideal detoxification cure

✓  
Strengthening of the immune system

✓  
Support of the intestinal tract

Immerse your Smarald® Anti-Aging-Filterstick in a vessel with drinking water (e.g. carafe, a drinking bottle, vacuum jug)

Shake it vigorously, then wait 3 - 20 minutes depending on the water temperature

Now your alkaline active water or any other drink is ready

## The filter consists of a mixture of 7 different high quality mineral balls

Active hydrogen

Effect of infrared heat

Reduction of redox potential

Small molecule clusters

- The Anti-Aging-Filter consists of a mixture of 7 different globular precious minerals according to our specially developed recipe.
- The filter is sufficient for about 800 liters (about 6-12 months).

Increase in pH value

Increase in oxygen concentration

Negative ion charge

Before

Reduced Smarald® Active Water

After

### Note:

In order to keep the optimum taste of your drinks, it is advisable to use one individual Anti-Aging-Filter-Stick for each drink (e.g. coffee, tea), otherwise the taste of your last drink prepared with that stick may pass over to the next one. A golden rule is: The higher the temperature of the drink, the faster the filter will work! That means a warm drink (e.g. hot water, coffee or tea) can be activated in about 3 minutes.

### Technical details:

Dimensions:

Height: 124 mm

Diameter: 17 mm

Weight: 50g

Outer material: stainless steel

Composition:

special precious minerals  
(natural minerals).

The minerals balls are in one

Nanotechnology process produced.

### Application:

1. Before using the stick for the first time, put it in a half-full, clean bottle with tap or mineral water. Shake the bottle vigorously for 30 seconds and then pour the water into the drain. Repeat this process twice.

2. Refill the bottle with water and shake it vigorously for 30 seconds. Wait 15-20 minutes before drinking the water. The longer the stick remains submerged in the water, the stronger the ionization becomes and the higher the pH value rises (up to 9.5). In addition, a strong negative charge (redox potential) is generated. If the taste is too strong, simply dilute it with some other water (preferably spring water).

3. Use one stick on (0.5 - 1.5 liter) bottles. For larger bottles, please take two or more sticks to get more ionized drinking water. The activation takes a little longer with larger dishes.

4. The Smarald® Anti-Aging-Filter-Stick is sufficient for about 800 liters.

5. Drink freshly prepared ionized water as often as possible!

**Watch out! Please be very careful with the use of glass jars, otherwise shaking may result in breaking of your glass jars !!!**
